

Refinery Technical Service Site

Secure Extranet

A technical customer service Web application enabling petroleum refiners to view and chart their FCC catalyst analyses securely online. The application integrates with a LIMS system to provide real time data updates.

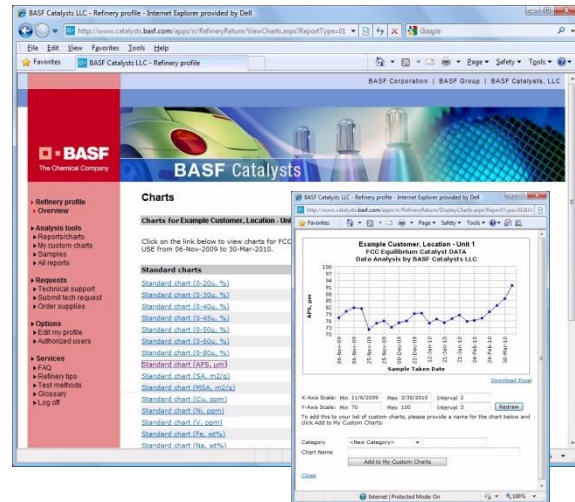

The major features of this site are:

- Online data analysis reports
- Custom and standard charts
- Online technical support
- Refinery sample status update
- FAQs
- Knowledge base
- Benchmarking

“BASF selected Astron for its e- business Web application development needs because of Astron’s unique blend of industry background and proven Web development skills.”

Fred E. De Santo
Ex-Director, e-Business Operations

Astron Services at Work

Astron developed this application using its refining industry domain knowledge, chemical engineering background, and Microsoft’s .Net software development and database technologies.
